

This illustration shows a boy that has brown cloudy eyes with bags, navy blue hair, with a dark scar-like mouth. On the boy's face, there are bloodstains and splatters on the bottom of the mouth and nose. The background has purple with black, white and dark blue string prints. I made this illustration using a program using Ai Sketchbook. The purpose of this drawing was too focused on Japanese Urban legend Kuchisake-Onna aka Slit Mouth Women. I also used different anime shows that talked about other urban legends and pulled together different features and added them to this piece. For example, the eyes were inspired by Hinata from Naruto Episode 1. This helped me form other parts in this illustration like the hair, nose, and bags under the character's eyes. This illustration displays social and personal issues. For instance, This shows a personal issue by the background and details. The background represents the thoughts of this character. The bloodstains and splatter represent the unseen and a gruesome story. The eyes I see and the eyes you see are like to cloudy and bloodlust marbles.

In this piece, This shows half of a Japanese Schoolgirl eat an eyeball in the mouth of a cannibal. I made this Illustration using a program using Ai Sketchbook. My intent in creating this was to learn more about animation and the Yami Kawaii fashion. My during my process I looked into the animation style and drawing of different artists that were already made. I a lot found on Instagram and found that most of the drawings that I saw were in pastel colors. This drawing shows social and personal issues. Though there are are many ways to interpret this drawing, A personal issue that is displayed here is that the half girl eating the eye doesn't show any emotions. This may be because she's eating, or she maybe she is eating herself, it's even possible that some may argue that this character is being watched, so she doesn't want to show her true feelings. This drawing also shows a Social issue by its name and the humanistic tongue and teeth. Thought Yami kawaii doesn't have to do with cannibalism I used the word by symbolizing a generational problem that I see is that, we have a hard time talking about what we are feeling and going through because it's rude to talk with your mouth full.
